Development Services

We provide assistance to our customers by working with the development community, the City of Colorado Springs and the individual property owner. We ensure utility infrastructure is built to Colorado Springs Utilities design specifications. Safe and cost-effective design is emphasized while recognizing that quality utility installations enable us to provide optimal reliability and lower prices to our community and citizen owners.

In addition, we assist our community by providing information regarding private service lines, easements, un-sewered areas and low-income housing.

Procurement & Contract Services

We pursue contracts that achieve a balance of interest and offer the "best value" by developing solicitation evaluation criteria that measure factors beyond initial acquisition price.

We actively encourage small businesses - especially minority and women owned firms - to participate in our process. For more information or to register on the **Rocky Mountain E-Purchasing System**:

- » ~~Supplier Registration~~
- » Bid Opportunities

Our key objective is to assist in managing cost while maximizing service and quality. We do this in part by examining and implementing value-added procurement services. Additionally, we use vendors, contractors and service providers who exhibit the most cost effective and advantageous financial, technical and staff capabilities.

We also strive to keep as much of our spending local as possible. We exceeded our goal of spending 30 percent locally in 2009.

Southern Delivery System-related jobs and contracts

Contract and job seekers should contact SDS prime contractors directly.
